# TOTAL PROTECTION FOR YOUR BEARING

A non-contact, centrifugal motionbearing seal that is easy to install as a lipseal and fits in the same place.

### CARTRIDGE DESIGN:

One step installation No secondary member to install Unitized non-contact complete bearing protection package.

## **APPLICATIONS:**

Centrifugal pumps, electric motors, gear boxes, pillow blocks etc. And horizontal rotating equipment of all types.

### **ENGINEERING DATA:**

- A). UNI-LAB seals are engineered standard in short axial length. .500 (1/2)" over-all length. Shorter lengths available. Flush mounted standard.
- B). UNI-LABS are engineered as non-contact centrifugal motion bearing seals. No shaft fretting or sleeve wear.
- C). UNI-LAB is engineered with I.D. static o'ring.
- UNI-LAB is engineered to directly replace lipseals and complicated labyrinth seals in horizontal applications.
- E). UNI-LAB is engineered and designed with a contaminate trapping groove inside the main body. As contaminates approach the bearing housing, the contaminate is repelled or trapped and expelled.
- F). Design features are such that the UNI-LAB is adaptable to almost any bearing houseing without any modifications.
- G). 660 bearing bronze is the standard material of the UNI-LAB. Other materials are available on request, for greater resistance to chemicals of corrosive elements.
- H). UNI-LAB is designed to withstand axial runouts and are designed with .040 axial and radial clearances standard .080 radial clearances available.

FOR COMPLETE UNI-LAB PROTECTION THAT BRINGS BEARING TO THE B-10 OR L-10 RATING.
